DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-20 and 34-48, drawn to displaying program content on respective planes of a rotatable three-dimensional (3D) object, where a user controls the rotation of the 3D object and the system designates the program content of one of the 3D object's planes as executable based on the orientation of the 3D object.

Group II, claim(s) 21-33, drawn to receiving a broadcast or network signal, mapping this signal onto one of several planes of a 3D object, and then displaying the combination of the 3D object and the mapped broadcast or network signal.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Group I describes a rotatable 3D object that rotates based on user input, the 3D object contains planes of executable programs and the orientation of the 3D object dictates which plane is executable by the described device.

Group II describes receiving an input signal, mapping the signal onto a plane of a 3D object, and then displaying the combination of the 3D object and the mapped signal.

Group I does not describe receiving an input signal transmitted via broadcast or a network, separating the image signal from its corresponding 3D mapping coordinates, locating a 3D object based on the 3D mapping coordinates, performing a perspective projection transformation on the image signal based on the 3D mapping coordinates, using a rasterization process to map the image signal onto the 3D object, and then outputting the output image signal at a prescribed timing using a frame memory, as described in Group II.

Application/Control Number: 09/869,175

Art Unit: 2672

Group II does not describe that the 3D object is rotatable and that a program is executable by the described device only if the 3D object is in a particular orientation, as described in Group I.

A telephone call was made to Jeffrey Filipek on March 8, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Application/Control Number: 09/869,175

Art Unit: 2672

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dan Washburn whose telephone number is (571) 272-5551. The examiner can normally be reached on Monday through Friday 8:30 a.m. to 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ulka Chauhan can be reached on (571) 272-7782. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
